DEVELOPMENTAL DISORDERS OF THE TONGUE
Kharkiv national medical university, human anatomy department
Scientific leader – Polyakova A., PhD

A rare genetic disease characterized by the presence of the small tongue and the rarest complete absence of the tongue. More common than small tongue, some of the cases are attributable to genetics because of the large muscle growth. The large tongue secondary occurs as a result of trauma or injury to the tongue tumors or lymphatic stasis or an overactive pituitary in adults. Leads to a large tongue, teeth and ill-placed showing impressions of teeth on the sides of the tongue. Adhesion of the tongue may be fully or partially. Full form occurs as a result of challenge on the seafloor in the mouth. The partial adhesion of the tongue or the tongue is the link to see more and caused short frenulum of the tongue or in association with the place is very close to the peak and because of restricted movement of the tongue where the people with the disorder difficulties of words, especially in the pronunciation of some characters similar and resort to the surgery cut the bridle. In most cases may be a tongue Mhtora full or Ocherma a rare condition caused by lack of fusion. Forums lingual side of this member together, the tongue cleaved partially more common and easy-Kthelm deep in the midline of the dorsal surface results in part the partial docking is full of sections, consisting of the tongue, in the case of fission partial case may be asymptomatic may meet the remains of foods, except in base part causing inflammation and pain. A tongue cracked is bad form manifests clinically in a number of grooves or Gutters small on the back of the tongue, located mostly in the gutter the central midline of the tongue, and despite the adoption of clinical manifestations basis for the classification of the tongue cracked (such as the thyroid, brain, or browser) remains the classification difficult, because some cases are associated with geographic tongue. The situation will improve with age, has been observed that some cases causing a trauma or chronic vitamin deficiency or disturbances nationality or ethnicity. The tongue cracked painless except for some cases associated Balthkeris and inflammation of the important to remove food debris in the gutter compound using a toothbrush or a soft sponge. Rhomboid glossitis average long considered a deformity. It happens because of the failure of leaflet individual to withdraw and retreat before the merger halves of these two sides of the tongue and all that the relationship between rhomboid glossitis Mediterranean and fungal infections chronic deposited, particularly Candida eggs present in a lesion, and this condition is common among people with partial diabetes. Rhomboid glossitis appears clinically in the form of average spot or oval Maanah red color on the dorsal surface of the papillae Lsan directly to the goblet. Together may be mucous or high by a little is divided into several aspects of textile models: 1. The lack of papillae with different degree of hyperkeratosis. 2. Thickness of the spinous layer with frequent extensions melanocytes in the dermis. 3. The spread of lymphoma cells within the connective tissue. 4. Increase blood circulation and lymph. 5. Hyalinization of the connective tissue between the muscles. Migratory glossitis (geographic tongue) consists of case multiple regions of the papillae filamentous middle of the tongue where it seems the central part of the lesion infected with pneumonia, and define the edges line white yellowish thin or bar, and look papillae Alkmih in the spaces Exfoliative Knqt small red high (prominent). Exfoliation spaces remain for a short time is placed in one and then they disappear and appear somewhere else. Filamentous papillae lose in the region of injury: The edges of the lesion showing hyperkeratosis with inflammatory infiltration in the dermis. It also notes the cells lobed and lymph within the cells of spinous layer of the epidermis, and form abscesses microscopy in the skin, and there is no specific treatment.
