## About InterRegioNovation

**InterRegioNovation** is the International Association devoted to the transfer and exchange of knowledge and innovations at all regional levels (country, region, city, community etc.) between knowledge transfer professionals (business, research institutions, policy makers, government agencies, individuals, others) in all countries of the enlarged Europe, CIS countries and from other continents for stimulating and enhancing economic and social growth in the regions.

This is a policy and research association that brings together all knowledge transfer professionals who are interested in delivering efficient, flexible, innovative and cost-effective services across the private and public sectors. We work closely with business, research and educational institutions, government agencies, policy makers, NGOs, media, individuals and other stakeholders to promote the interests of their industries.

Our members understand the changing needs of the transfer and exchange of knowledge and innovations and through continuous professional development, marketing and networking opportunities offered in this association, we keep current with the latest knowledge trends and issues that challenge people in their work and life journey. We also offer expansive opportunities for partner connection through our networks.

Journal "Regional Innovations" is one of the Association's tools for innovators and everybody who is interested in any aspects of innovation development.

## About journal

On behalf of the Editorial Board, it gives us a great pleasure to welcome you to the third issue 2017 of the Regional Innovations Journal. This is a special issue dedicated to **the International Conference “Investment Policies: New Models, New Markets, New Practical Strategies”** (15-16 November 2017).

The aim of the conference was involving a wide range of experts in discussing important trends and challenges of investment policies nowadays. Organizations around the world are contemplating alternative approaches to international investment. The focus of the conference was on how to attract the right kind of international investment that can help enhance skills and education, transfer competencies and strengthen manpower as well as build infrastructure, innovation systems and contribute effectively to the competitiveness of the host nation. The conference has provided an excellent opportunity to disseminate, share and discuss the impact of university-university, university-business and business-business interactions.

This is an independent, peer-reviewed, Internet-based international journal devoted to publishing original research papers of highest quality, sharing ideas and discussing innovation sector within regional dimensions. Normally, four issues are prepared each year. The journal welcomes to submit research papers by exceptional innovators, leading universities, globally recognized business, government agencies, policy makers and political leaders. The Regional Innovations publishes original research papers, policy analyses, review papers and book reviews in order to establish an effective channel of communication between business, research institutions, policy makers, government agencies, and individuals relative to the analysis of various aspects of knowledge and innovations transfer and exchange within regional dimensions.

We intend that our readers will be exposed to the most central and significant issues in innovations development. We wish to publish papers that exemplify the highest standards of clarity, and that promise to have significant impact on existing front-line debates or to lead to new ones. The journal explores key priorities of the knowledge and innovations transfer and exchange in terms of critical aspects of human life (economy, law, science, business, health, education, culture etc.). We therefore welcome submissions not only from established areas of research, but also from new and emerging fields and those which are less well represented in existing publications, e.g. engineering studies, biomedical research etc.

We are delighted with, and immensely grateful to the large numbers of colleagues, both members of the Associations InterRegioNovation and FranceXP (France), representatives from many universities in France, UK, Spain, Ukraine, Latvia, Belarus, Azerbaijan, India, China, Viet Nam, Iran, Nigeria and other institutions, who have supported the editorial process. And we are very proud of the expertise that they collectively bring, which we believe is unsurpassed by any contemporary innovative journal. We are immensely grateful to our colleagues for their support and advice through the process of setting the journal up, and for the confidence they have placed in us in supporting this initiative at a time of economic uncertainty.

In the development of the Regional Innovations to date, we would like to enlist the support of a number of organisations who wish to promote this online journal to their experts. To ensure its sustainability, we would also like to invite other organisations, networks, conferences and meetings to associate themselves with the Regional Innovations. We therefore aim for the Regional Innovations to become the leading online forum to globally disseminate outstanding research papers on innovation sector in regional dimensions. Being an online periodical, the Regional Innovations is also a forum for exchange of imaginative ideas readers wish to share. Contributions of articles on innovations sector and your comments about this issue are very welcome.

We do hope you enjoy and benefit from the Regional Innovations! And many thanks for staying with us in 2017!

**Jean-François Devemy**  
Publishing Director

## **PREVENTIVE MEDICINE AS A STRATEGY OF MODERN HEALTH CARE SYSTEM IN THE FIGHT AGAINST THE URINARY SYSTEM PATHOLOGY IN CHILDREN**

Health is one of the main conditions that determine the full development of the child. Children's health directly affects future socio-demographic and socio-cultural indicators of the country's population development [1]. The incidence rate and prevalence of diseases are the most important criteria, which characterize children's health [2].

In children population of Ukraine in the structure of morbidity and prevalence of various diseases over the past 5 years, the urinary system pathology took the 7<sup>th</sup>-8<sup>th</sup> place and accounted for 2.0-5.0 % [3, 4]. According to the data of the World Health Organization, diseases of the urinary system organs in the structure of morbidity and prevalence of various diseases of children population in economically developed countries occupied the 7<sup>th</sup> place and amounted to 2.5-3.0 % [5].

The leading strategy of modern health care system in the fight against the urinary system pathology of children should be preventive medicine, which is represented by a set of measures aimed at the prevention of diseases, rather than on their treatment. The basis of preventive medicine is the determination of risk factors, which are understood as potentially dangerous to health factors of behavioral, biological, genetic, social character, environmental factors, increasing the probability of diseases development, their progression and unfavorable outcomes. The effect of risk factors on a person is purely individual and the probability of diseases development depends on the adaptive capacity of the organism [5].

In different regions the contribution of risk factors for the development of the urinary system pathology of children may have its own peculiarities. We have singled out such risk factors for the development of the urinary system organs pathology in children of the Kharkiv Region as a reduced body weight and length of the baby at birth, the female sex of the baby, smoking of its parents, presence of abortions in the mother's case history, complications during pregnancy (placental insufficiency and preeclampsia) and delivery (placental abruption and abnormal labour activity), presence of genital and extragenital pathology in the mother (urinary system diseases).

Thus, preventive medicine should become one of the strategies of modern health care system in the fight against the urinary system pathology of children. The basis of preventive medicine is the determination of risk factors on the basis of which it is possible to make a prediction not only the development of the urinary system pathology in children, but also its character – congenital or acquired.
