ACADEMIC INTEGRITY AND MOBILITY AS MECHANISMS OF EDUCATIONAL REFORM IN UKRAINE

Kuzmina I.U.

Kharkiv National Medical University, Kharkiv, Ukraine

Issues related to ensuring the policy of academic integrity of educational institutions are increasingly gaining relevance. The policy of academic integrity is part of the state educational policy, which is implemented through the Cabinet of Ministers of Ukraine and the central executive body in the field of education - the Ministry of Education and Science of Ukraine.

The purpose of this study is to study the principles of academic integrity and mobility of teachers of higher education institutions in Ukraine.

Presentation of the main material. State policy in the field of education and science plays a crucial role in ensuring the development of human capital and obtaining economic benefits in the form of sustainable growth and a competitive economy, and therefore social and individual well-being, future prosperity and quality of life.

Today, Ukrainian education does not meet modern demands from the individual, society, the needs of the economy, etc.

The educational policy of Ukraine is formed within the framework of global development trends, the Europeanization of the educational sphere and the social demand for a competent individual who has a clear civic position, is able to solve complex life and professional issues, and is able to learn throughout life.

The policy of academic integrity of the educational environment is a set of regulatory and legal framework and activities of authorized authorities, heads of educational institutions to implement the principles of academic integrity as a norm of academic life, with the aim of establishing a high level of academic consciousness and culture of all participants in the educational process.

Academic integrity (sometimes also called scientific integrity) is an ethical principle and norm of behavior defined in the field of education and research. It involves adhering to high standards of honesty, intellectual integrity and moral transparency in all aspects of academic activity, such as teaching, research, publications and others.

The main aspects of academic integrity include: Truthfulness and intellectual honesty in conducting facts and research results accurately and objectively.

Avoiding the use of other people's ideas, texts or research without properly indicating the source of information. Respecting copyright when using the works and intellectual property of others. Independence and objectivity from any external pressure or influence that may affect the objectivity of their results.

Researchers must adhere to ethical standards in conducting research, including protecting the rights and well-being of research participants. At the same time, students must perform tasks and tests honestly, presenting their own work. If researchers use the work or ideas of others in their research, they must properly cite the sources and give due recognition to the authors.

Any changes or manipulation of research data that lead to their falsification is a serious violation of academic integrity. Researchers must publish research results in accordance with scientific standards and ethical norms.

Academic integrity is the basis of activities in the field of education and science, and it contributes to the development of knowledge and trust in the academic environment. Without its observance, serious problems may arise, such as loss of trust, loss of reputation and even legal consequences

Mobility in the educational context can act as one of the mechanisms of educational reforms in Ukraine, which contributes to the development of the education system, improving the quality of education and creating a competitive educational environment. Here are some mechanisms and aspects that enhance the role of mobility in educational reforms in Ukraine.

Ukraine must become a competitive and successful country in terms of the level of well-being of its people and be equal among the leading countries of the world community.

Profound changes in the national higher education system are the result of the action of a combination of various factors. The process of creating a knowledge society places the sphere of higher education at the center of the formation of future social and professional specialists.

Conclusions. The issue of ensuring and observing academic integrity is one of the priority areas of activity of the modern scientific and educational community, as well as one of the most important and urgent tasks facing higher educational institutions of Ukraine today. Academic integrity creates trust in the results of education and increases the further career success of graduates. Given the importance of ensuring academic integrity, there is a need to discuss this concept, analyze and, most importantly, explain it to higher education applicants.
